INTRODUCTION

The Digital Literacy Project is a tool designed to generate awareness and develop the necessary skills for the safe, responsible, and effective use of digital technologies among students. The Digital Literacy Project primarily targets various aspects related to digital technologies, including the safety of the internet, cyberbullying, digital communication, privacy, and identifying various forms of internet frauds, which are crucial today.

The scenario for this digital literacy project involves a college student's daily internet-based activities. During this process, the student is exposed to various internet risks, including phishing emails, cyberbullying, and internet fraud. This digital literacy project shows the significance of digital literacy skills for the wise response to the aforementioned internet risks.

This digital literacy project primarily aims to show the significance of being a smart digital citizen today.

Task 1 – Digital Literacy Infographic

In completing Task 1,

I developed a one-page Digital Literacy Awareness Infographic with the aim of helping students comprehend the significance of digital literacy in their everyday lives. My Infographic contains three main aspects of digital literacy: what digital literacy means, internet safety, and digital tools for students. I defined digital literacy as an individual's capacity to utilize technology in an effective, responsible, and safe manner. I also included various safety guidelines for students on how to stay safe while on the internet. Moreover, I included various digital tools available for students to enhance their productivity and learning.

In designing the Infographic, I used Canva due to its ease of use and availability of various templates and icons. This helped me to develop an attractive and organized Infographic with little effort.

In designing the Infographic, I encountered difficulties in effectively presenting the required information in an organized manner on a single page. However, I found it interesting to experiment with various color schemes and styles to ensure that the content was attractive and comprehensible.

Task 2 – Student Digital Portfolio

For Task 2,

I created my student digital portfolio by creating profiles on three important platforms: GitHub, LinkedIn, and Kaggle.

On GitHub, I created a profile README with information about my name, branch (CSE-AI & ML), year, and a small description about my learning objectives. This profile will be used for storing and showing off coding projects.

On LinkedIn, I added information about my education, skills, and a professional profile for networking with peers, seniors, and recruitment agencies.

On Kaggle, I created a profile for practicing data science, participating in competitions, and improving my analytical skills.

I aim to create these platforms for a strong online presence as a student, which will help me show off my skills to future employers and providers of internships.

In the coming four years, I aim to continue adding projects on GitHub, be active on LinkedIn by networking and adding achievements, and improve my ranking on Kaggle by participating in competitions on the site. This will help me grow academically and professionally as a student.

Task 3 – Coding & Collaboration Platforms

In Task 3,

I have explored coding platforms and collaboration tools that can help me enhance my technical skills and be efficient in working virtually. For coding, I have created an account on HackerRank and completed a beginner-level coding challenge. This will help me understand basic programming concepts and enhance my logical thinking skills.

For collaboration tools, I have created a Google Form with the title “Digital Literacy Awareness Quiz,” consisting of five different questions related to safe internet use and responsible use of technology. The form includes multiple-choice and short-answer type questions. After completing the form, I have also viewed the responses in the Google Spreadsheet, which can be used for easy analysis of the results. Additionally, I have shared the form in the README file and added screenshots of the form and spreadsheet.

These tools will help me academically, as they can enhance my coding skills, increase my knowledge about different digital tools, and help me collaborate efficiently in academic projects and research work.

Task 4 – Professional Email & Etiquette

For Task 4,

My focus was on professional communication and email etiquette. I composed two professional emails: one for requesting a deadline extension for an assignment from a professor, and another for expressing interest in a summer internship opportunity. I also developed a social media Do's and Don'ts checklist.

One communication scenario that I thought of for this task was a student sending a vague email to a professor with a lack of a proper subject line and a poor tone, which may cause confusion.

From this task, I learned that a clear subject line, proper email structure, and good tone are crucial for professional email communication. I also learned that responsible communication is key to creating a good professional image for oneself so that there is no confusion or misunderstanding.

Task 5 – Cybercrime Awareness Case Study

For Task 5,

I came up with a case study on cybercrime awareness, focusing on the issue of cyberbullying, which occurred in real life. The case study addressed the issue of how individuals, especially students, are targeted through social media platforms with harmful messages, fake accounts, and shaming.

As I researched for this task, I was surprised by the prevalence of cyberbullying and how fast it can spread on social media, causing emotional harm to victims, with many victims being reluctant to report the abuse due to fear or shame.

As a result of this task, a habit that I will adopt or change in my life is that I will be more considerate in my online interactions, ensuring that I use respectful and uplifting content, as well as report cases of cyberbullying where I witness them.

CONCLUSION

Overall, this project has helped me establish a strong understanding of digital literacy and its significance in academic and professional settings. I have learned how to produce visual content, establish a professional online presence, code, and effectively communicate through emails. I have also become familiar with online threats and safety. Through this, I have enhanced my technical, communication, and critical thinking abilities. This project has helped me prepare for a future where I will be able to effectively use digital literacy, which will be beneficial for my academic and professional growth.
